## ● Your law firm's web site is all about converting visitors into clients.

Would you invite a client into your office when it wasn't looking its best? Your web site will give a potential client their first impression of your firm. Show them a cookie cutter web site, and you become "just another lawyer". Show them a professionally designed web site that was built with conversion in mind, and you have a new client.

## ● First Page Search Engine Placement

More people are turning to Google instead of the phone book when looking for an attorney. If your firm doesn't show up on the first page of a search in Google, you're losing clients.

We have achieved first page rankings in Google for law firms across America using professional link building tactics through custom content and social networking.

## ● Law Firm Hosting

Quality law firm web hosting is vital. Imagine being ranked on the first page Google from a successful law firm search engine optimization campaign. Having a professional law firm web design. A powerful law firm content management system. And having server downtime keeping potential clients away from your firm.

This is a nightmare that happens everyday for lawyers who choose cheap hosting companies or companies that do not fully understand the importance of your law firm's web site always being accessible.

## ● Take Control of Your Web Site

Free yourself from your webmaster and take control of your law firm's web site with the search engine friendly Law Firm Web Editor from SEOLawFirm.com.

This content management system will allow you to edit content, edit pages, add and remove pages, manage blogs, and many other features.
